Exp: 8. Configuration and security setup of a wireless LAN using Cisco packet Tracer.

Aim: To configure a wireless LAN using a linksys wireless router in cisco packet Tracer and securely connect three PCs using a WEB security key

Observation:

- A linksys wireless Rooter was connected to three PCs to form a wireless LAN
- The router IP address was configured as 192.168.0.1
- The SSID of the wireless network was configured as mother network.
- WEP security was enabled on the wireless router with the security key.
- Static IP addresses were assigned to the three.

PCs:

PC0 : 192.168.0.2

PC1 : 192.168.0.3

PC2 : 192.168.0.4

- The Subnet mask was set to 255.255.255.0 for all PCs.
- The default gateway was set to

192.168.0.1 for all Pcs.

- All three Pcs were connected to the Mother Network using the configured WEP key.
- The wireless connection the Pcs and the router.

Result: Thus, the wireless LAN was successfully configured using a Linksys wireless Router in cisco Packet Tracer, and all three Pcs were connected securely to the wireless network.
